12
Correlator
First Coherent processing: integrating over L samples and filtering with a half-band filter (thereby providing oversampled signal as output)
11b
Data wipeoff (complex squaring or similar operation)
11c
Mixing and 2nd coherent processing
(for performing spectral estimation using:
- DFT, DHT, DST, ...;
- autocorrelation based approaches; or
- other sup-resolution techniques.)
11d'
Fine acquisition kernel
11
